INDICATOR METADATA

Adult health (OECD)

**June 2024**

## Adult health (OECD)

### About

This dataset is from the [WHO Health Inequality Data Repository](#).

This dataset contains data on self-reported health status disaggregated by age, economic status, education and sex, published by the Organisation for Economic Co-operation and Development (OECD).

### Data source

Disaggregated data were sourced from the Health Status (HEALTH\_STAT) and Risk Factors for Health (HEALTH\_LVNG) datasets of the OECD Data Explorer (<https://data-explorer.oecd.org/>). The OECD Data Explorer contains data and metadata for OECD countries and selected non-member economies. Data originate from various sources, detailed in the links to indicator metadata.

### Methodology

OECD data originate from various sources, with the definitions, sources and methods available here: <https://web-archive.oecd.org/2023-11-14/214497-Table-of-Content-Metadata-OECD-Health-Statistics-2023.pdf>.

### Dataset metadata

<b>Date of first publication</b>	April 2023
<b>Date of updated publication</b>	June 2024
<b>Expected frequency of update</b>	Annual
<b>Date of data extraction</b>	23 April 2024
<b>Temporal coverage</b>	1960–2022
<b>Spatial coverage</b>	OECD countries
<b>Spatial granularity</b>	National
<b>Number of countries, territories or areas</b>	49
<b>Number of indicators</b>	13
<b>Number of dimensions of inequality</b>	4

### Inequality dimensions

**Age** was categorised in four groups between 15 and 65+.

**Economic status** is based on wealth quintiles. If data come from health surveys and relate to individual income, the individual's income was used to assign them to income quintiles. If data come from household surveys and relate to household income, an equivalisation of income for persons within the household was used (a common method divides household income by the square root of the household size).

Adult health (OECD)

**Education** is the highest completed level of education, defined according to the latest International Standard Classification of Education, ISCED-2011.

**Sex** (male and female).

### Disclaimer

The estimates presented may differ from, and should not be regarded as, the official national statistics of individual WHO Member States or official WHO estimates.
